

PNG FISHING INDUSTRY ASSOCIATION (FIA)

To: FIA PNG Stakeholders including government, NGOs, retailers and business partner

Subject: CO2 Commitment Letter to Assess CO2 Emissions

Date: 21st May 2024

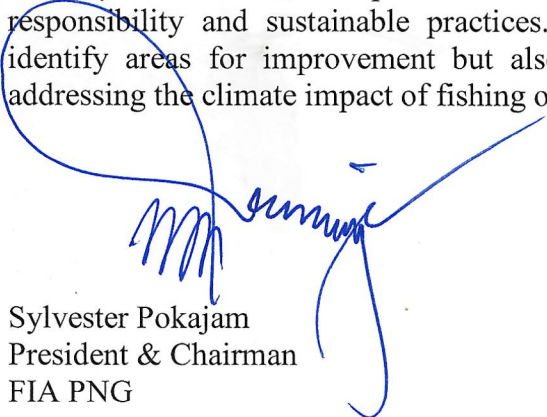

Place: Shangri La Hotel, Bangkok – Thailand

The fishing industry is increasingly recognizing the need to address environmental sustainability, including the reduction of carbon dioxide (CO₂) emissions. To demonstrate their commitment to mitigating their carbon footprint, we are conducting a comprehensive assessment of their CO₂ emissions. This includes looking at Scope 1 emissions, which refer to direct emissions from owned or controlled sources.

By assessing CO₂ emissions within the fishing industry, companies aim to understand the environmental impact of their operations and identify opportunities for improvement. This comprehensive assessment involves analyzing factors such as fuel consumption, energy use, and transportation methods to calculate the amount of CO₂ emitted directly from their activities.

Engaging key stakeholders, including fishing companies, employees, and environmental organizations, is crucial for a thorough assessment of CO₂ emissions in the Fishing Industry Association. This assessment will provide valuable insights, data, and perspectives that can help companies develop effective strategies to reduce emissions and promote sustainability.

By committing to assess CO₂ emissions and involving key stakeholders in the process, the Fishing Industry Association of Papua New Guinea (PNG) demonstrates its dedication to environmental responsibility and sustainable practices. This collaborative approach not only helps companies identify areas for improvement but also fosters transparency, accountability, and innovation in addressing the climate impact of fishing operations.
